**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4-7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Meyer (U.S. Patent 6,053,458).

Meyer discloses a rod clip having first and second portions (102, 104) which are folded to form a channel (Figure 5, for example). There is a lever retaining device (70, 72). The divider between (62) and (64) in Figure 5 meets the recitation of the rod-retaining tab.

The hinge is formed by protrusions/apertures (Figures 1 and 2, for example).

The locking device is a snap latch (69, 78).

The lever retaining device is a protrusion (70) extending below a bottom surface (Figure 5, for example).

The protrusion is a cylinder and there are latches/wings (72).

Regarding claim 9, note that a method step does not further limit an apparatus claim, since the apparatus of Meyer could have been made in a one-step injection molding process.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Meyer (U.S. Patent 6,053,458) in view of Yiu et al. (U.S. Patent 6,514,027).

Meyer et al. does not teach the threads in the recesses. Yiu et al. teaches a threaded recess on a rod clip. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the threaded recesses of Yiu et al. with the recesses of Meyer in order to better secure a rod.

***Allowable Subject Matter***

Claims 10-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***
